

# -Save the Date- Lightweight Crypto Day

Room 1003, EE Faculty, Meyer building

Monday, March 28th 2016

Lightweight Cryptography is an emerging field of research trying to address low-end devices that need security such as RFID tags. The day is designated to be a meeting point between academia and industry, as this field is closely connected to both communities.

**Local organizer:** Orr Dunkelman

**Program chairs:** Nathan Keller & Itai Dinur

**Confirmed speakers include:**

- **Orhun Kara**, Tubitak, Turkey - The security of lightweight algorithms
- **Shay Gueron**, Haifa University, Israel - optimized hardware implementation of AES - from high performance to Lightweight designs

Preliminary program and registration available here:
